Dear colleagues,

We would like to invite you to our fourth general meeting of our Society for CSF analysis and clinical neurochemistry. Within this meeting we try to cover most recent neurochemical findings. This time we have a special focus on neurodegenerative and inflammatory diseases and how these findings make their way into diagnostic criteria. Technical developments and standardization are also specifically addressed.

In our last meetings in Amsterdam, Berlin and Barcelone the short oral presentations of selected posters have represented one of the most appreciated features of our meetings.

Therefore, we further valorized this part of the program by including some slots for longer talks based on abstract selection.

We hope that we could gain your interest and welcome you to Montpellier.
